

IMPORTANT NOTE

The below points must be prepared by the subscriber before the IDM installation team schedules the installation visit to minimise any delays

A- All the computers which will be connected to the ADSL service must be equipped with a network card

B- If you require to have more than 1 computer connected to the DSL modem / Router make sure that all network cables are installed

C- If you have a PBX at your premises, please make sure that your electrician or PBX company prepares the line as per the below diagram

D- The Telephone cable or outlet which will be used for DSL must be connected to the room where the modem is to be installed

Pre-installation Survey Questions

1- How many telephone handsets are connected in parallel to the DSL Line?

2- Do you currently have a network installed at the DSL premises such as router, wireless access point etc...(Please specify) YES NO

3- Is the Telephone Line for DSL connected to the PBX (Central)? YES NO

(If yes, please make sure that your electrician or PBX company prepares the DSL Line as per the below diagram prior to Installation)
